Management Strategies in Farming: A Review**Dr. Krutika Khandare**

Dept of Economics,

Dr. Babasaheb Ambedkar Marathwada University Aurangabad.

Abstract:

Agriculture is a complex topic and when handled with other challenges it becomes more complex. The issue with farming is that, it is heavily dependent on rainfall, and if the region is dealing with the issue of water scarcity then it becomes highly difficult to provide sustainable solution.

Marathwada is a region which has a long history of droughts and is infamous for the farmer's suicide. The region has multiple challenges, majorly droughts, rain deficit, wet droughts, soil quality, low per capita income for farmers, less developed supply side, lower irrigation facility, low credit rate etc. major studies are focused on either of these issues or some other pertinent issues.

The main objective of this research is to review the research on management strategies done by the farmers in the world. Because when we think about the agriculture sector especially in India, the first thing that comes to mind is droughts and its impact on agricultural sector and the often loss of the farmers. It is observed that there are certain farmers who with their systematic planning, management of land and water have been successful in gaining outstanding production even in drought conditions.

Keywords: Scarcity, Drought, Irrigation, Per Capita Income.

Agriculture is a complex topic and when handled with other challenges it becomes more complex. The issue with farming is that, it is heavily dependent on rainfall, and if the region is dealing with the issue of water scarcity then it becomes highly difficult to provide sustainable solution.

Marathwada is a region which has a long history of droughts and is infamous for the farmer's suicide. The region has multiple challenges, majorly droughts, rain deficit, wet droughts, soil quality, low per capita for farmers, less developed supply side, lower irrigation facility, low credit rate etc. major studies are focused on either of these issues or some other pertinent issues.

The main objective of this research is to review the research on management strategies done by the farmers in the world. Because when we think about the agriculture sector especially in India, the first thing that comes to mind is droughts and its impact on agricultural sector and the often loss of the farmers. It is observed that there are certain farmers who with their systematic planning, management of land and water have been successful in gaining outstanding production even in drought conditions. The present research is totally depends upon the secondary data only.

The study done by Achuthan on 'Agricultural Development in Maharashtra Problems and Prospects' gives insights about the trends and sources of growth in production of major crops and crop groups and changes in them over the two phases of the period in Maharashtra. It is one of the most industrialised and urbanised states In India. Paradoxically, however, it also enjoys the dubious distinction of a state having highest rural-urban disparity in standard of living of its population. Apart from the direct impact of agricultural growth on generation of rural employment and incomes, its significant secondary linkages with the development of rural non-farm sectors are more crucial. To examine trends & to investigate
