M. Sc. Nanotechnology courses having focus on employability

M. Sc. Nanotechnology course itself it is a multidisciplinary branch of research and development. Nanotechnology has the potential to enhance the manpower which will be very beneficial for the society as well environment. In M. Sc. Nanotechnology syllabus we have courses which basically focus on employability they are fundamental topics in nanotechnology, advances in nanotechnology, chemistry, nanomedicine etc.

We have our practical course in such a form by which all the students can get practical knowledge very constructively and ultimately it will help them get the job in the respective place.

As a part of enhancement of employability activity for M. Sc. Nanotechnology student we often organized a guest/invited lecture of industry persons to interact with our students and also we organized industrial visit for student to understand the work culture of industry as well as how we can be eligible to get the job in the industry with the help of all the fundamental and advanced technology knowledge of nanotechnology.
