

## **The Survey of Parli City**

The concern Survey is depending on primary facts. Primary data collected through Random sampling methods. 200 respondents selected from Parli city in Beed district. Interview schedules method is used for collection of various dimensions of pollution. Thermal power plant and railway transport are main factors are contributing into environmental pollution. These polluting sources are largely affecting the daily life of the residents of the Parli City. I employed schedule – Interview methods for collection of various dimension of pollution. I observed the citizens were suffering from Water pollution, Air pollution, Noise pollution, Soil pollution and hyper temperature in Parli city. Waste material was not managed with scientific way. The survey has been carried out with the help of the 15 research student. (Deshmukh P.V. Associate Professor, Dept. of Economics) during **20<sup>th</sup> March to 30<sup>th</sup> March 2015**.
